

# Norfolk & Western Class Y-6, Y-6a, Y-6b 2-8-8-2 Compound Mallets

**HO SCALE**

Faced with the need to move more and more coal, in 1936 the N&W started to develop it's own version of the "modern" steam locomotive. In true N&W fashion, and in it's own Roanoke shops, the modernization of the true compound engine Mallet got underway! Based on development of the original U.S.R.A. 2-8-8-2's, the N&W Y-6 series of true Mallets were the pinnacle of these workhorses. These were as modern as could be! Higher capacity boiler, cast steel frames with integral cylinders, American multiple front-end throttle, Worthington 4-1/2-BL feedwater heater, roller bearings, Berkley stoker, oh my!

Well suited to mountain terrain's heavy grades and sharp curves, with inherent slow speed and a wide range of work, these locos became the workhorses of the N&W! The Division Point and Boo-Rim Precision will bring you these long awaited modern Mallets that were so common on the tracks of the N&W. We will offer this LIMITED EDITION project in different numbers of all sub-classes. As is usual, lighting is included. With a limited number of pieces to be produced, you are well advised to contact your dealer to reserve yours!

- As usual, we are indebted to those folks who publish the information and photos we need. We urge you to buy their books and photos.
